### Current Research:

- 03/2021 – current      Project WEST: Wellbeing Evaluation of Surgical Trainees.  
Funding through departmental funds at UW, Michigan, Emory, Vanderbilt.  
This multi-institutional project (Emory, Michigan, UW, Vanderbilt) uses  
serial on-line survey methodology to assess various parameters with  
implications for trainee well-being.  
Role: Site PI.
- 2021-current            R01, NIDCD 1R01DC019352  
National Institute for Deafness and other Communication Disorders.  
“Reducing Social Isolation for Adults with Communication Disabilities.”  
This project targets reducing social isolation and improving life participation  
for adults with communication disabilities and their families by examining  
the reciprocal relationships among participation in daily communication  
activities, the novel construct of perceived social support for communication  
provided by family / key communication partners, and the third-party  
disability impact of communication disorders on family / key communication  
partners for people with speech disabilities due to Parkinson’s disease,  
laryngeal dystonia, laryngectomy, and oral-pharyngeal cancer.  
Role: Co-Investigator (PI: Baylor).
- 06/2022 – 06/2023    AAO–HNS: Governing Council of the Women in Otolaryngology (WIO)  
Section.  
“Insights in Career and Family Success from Women in Private Practice  
Otolaryngology.” (\$3,600)  
This project will use a qualitative interview process to explore how female  
otolaryngologists in private practice navigate home and work commitments.  
This is a follow-up project to the grant titled “Work-Life Balance among  
Women in Academic Otolaryngology” designed to understand the issues that  
are germane to private practice female otolaryngologists.

Neck Cancer Patients.”  
The purpose of this research is to determine if the use of electrical stimulation  
of the cervical musculature (Neuromuscular Electrical Stimulation or NMES)  
in conjunction with intense swallowing exercise therapy (STx) has any  
additional benefit over intense swallowing exercise therapy alone in the

treatment of patients with difficulty swallowing after radiation therapy for head and neck cancer.
